NESTINATION: A SINGAPORE BIRDVENTURE

Welcome to the Avian Hot Spots Map! You will be going on a journey, flying around Singapore exploring the wonders of nature as a bird and experience life as a bird, you might get injured, hungry and potentially die but that is the experience of a bird's life. Let's begin with the first location, leaving the East-Australian Flyway and find a location to land in Singapore!

Continue flying to Singapore (go to page 3)

AVIAN HOT SPOTS MAP

As you fly nearer to Singapore, you realise there are two flyways for you to travel. You contemplate, do you take the Central-Asian Flyway or the East-Asian Australasian Flyway?

BIRD OBSERVATION HIDE 1D

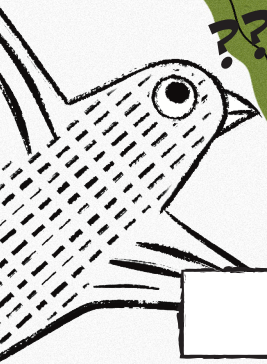

SUNGEI BULOH WETLAND RESERVE

CENTRAL-ASIAN FLYWAY

EAST-ASIAN AUSTRALASIAN FLYWAY

BULOH ISLAND

?!

Take the Central-Asian Flyway
(go to page 8 and 9)

OR

Follow the East-Asian Australasian Flyway
(go to page 6 and 7)

You decided to take the East-Asian Australasian Flyway. You see a bunch of birds gathering at the mudflats. There must be food nearby! You wonder, should you continue flying forward to the Kranji Marshes? Or should you land and enjoy the food and rest a bit at the mudflats?

Continue flying to the Kranji Marshes
(go to page 13)

Fly to the mudflats
(go to page 10)

Halfway flying through the Central-Asian Flyway, you stomach started growling uncontrollably. You started thinking if your choices to take the Central-Asian Flyway was the right choice but you were thinking 'maybe I could last a little longer'. Should you continue flying without resting, or should you fly to the mudflats and see your luck?

CONTINUE FLYING

TO THE MUDFLATS

OR

Continue flying without resting
(go to page 22 and 23)

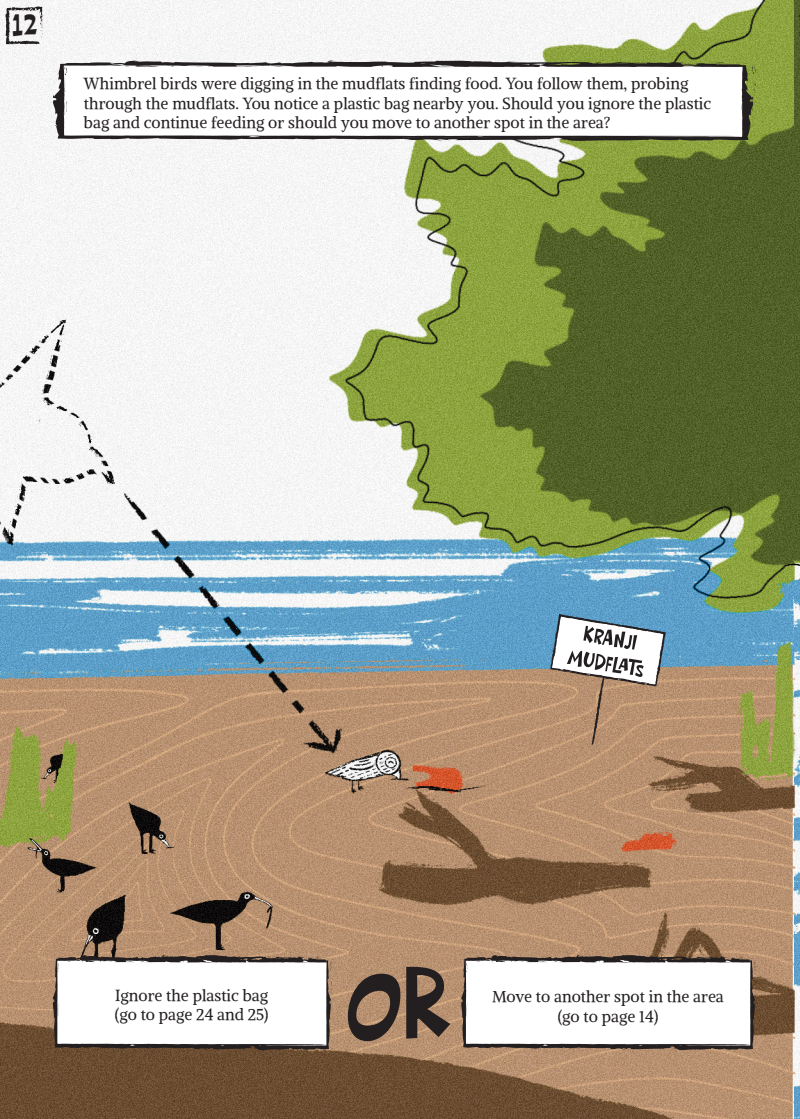

Fly to the mudflats
(go to page 10)

You see a lot of birds gathering in groups poking on the mudflats and being able to find food as you flew closer to the mudflats. You are curious and hungry for food too. You decided to land, maybe you are in luck finding food in the mudflats too!

You decided to land
(continue to page 12)

Whimbrel birds were digging in the mudflats finding food. You follow them, probing through the mudflats. You notice a plastic bag nearby you. Should you ignore the plastic bag and continue feeding or should you move to another spot in the area?

Ignore the plastic bag
(go to page 24 and 25)

OR

Move to another spot in the area
(go to page 14)

The reeds in the Kranji Marshes swayed against the wind. You see Terek Sandpiper birds feeding. You feel hungry yet tired from the grueling flight. Which will you choose? Perching on the reeds or feed near the water?

Feed near the water
(go to page 15)

OR

Perch on the reeds
(go to page 16)

You decided to move to another spot in the area, the Kranji Marshes. You see a bunch of Terek Sandpipers having good luck in finding food in the waters. You manage to get a fish! However you did notice the water is polluted with chemicals. Would you like to continue enjoying the food or would you like to seek safety temporarily on the reeds?

Continue enjoying the food
(go to page 26 and 27)

OR

Seek safety temporarily on the reeds
(go to page 15)

You seek safety by temporarily perching on the reeds. You manage to breathe for a bit not realising how tired you are after immediately flying and finding food once you land. You see Little Egret birds walking with long strides. You sighed at their ability to walk because you are unfortunately a small bird. The water is deeper here. You wondered maybe you should go near the coast to find food, the water is shallower there.

Fly to coast
(continue to page 16)

You reach the coast. You see a bunch of humans walking back and forth from the sea to land. You see that they are collecting something and a long red worm coming out of the water. Out of curiousity, you wanted to find out what it was, yet you knew how dangerous it is to be close to humans. Do you want to fly towards the humans? Or do you want to continue flying along the coast?

Fly towards the humans
(go to page 19)

OR

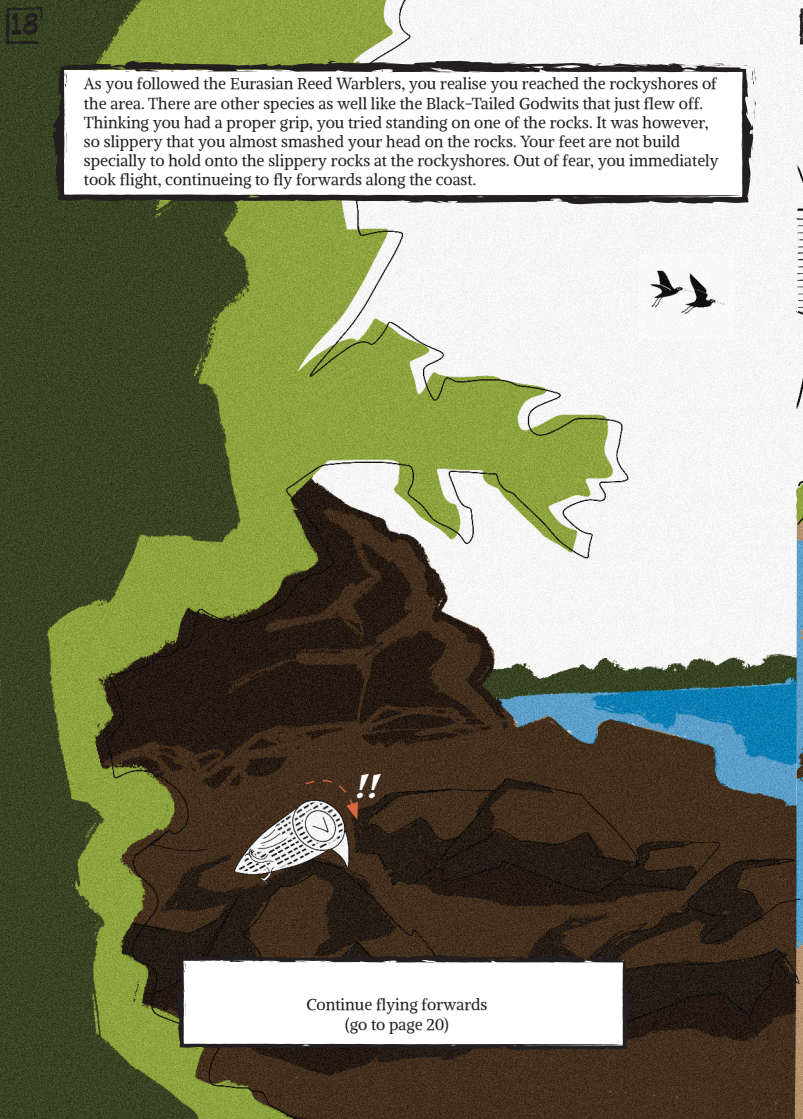

Fly along the coast
(go to page 20)

You see a few Eurasaian Reed Warblers walking forward. Out of curiosity, you decided to follow the direction they are headed to. Maybe you can finally find a place to settle!

Follow the Eurasian Reed Warblers
(go to page 18)

As you followed the Eurasian Reed Warblers, you realise you reached the rockyshores of the area. There are other species as well like the Black-Tailed Godwits that just flew off. Thinking you had a proper grip, you tried standing on one of the rocks. It was however, so slippery that you almost smashed your head on the rocks. Your feet are not build specially to hold onto the slippery rocks at the rockyshores. Out of fear, you immediately took flight, continueing to fly forwards along the coast.

Continue flying forwards
(go to page 20)

You flew towards the humans and just in time when you came, they left. You saw the long red worm again. Out of curiosity, you flew even closer to it.

Fly closer
(go to page 21)

You see a bunch of birds enjoying themselves in the upper coastline. 'Maybe I am meant to be here' you told yourself. You decide to continue staying here.

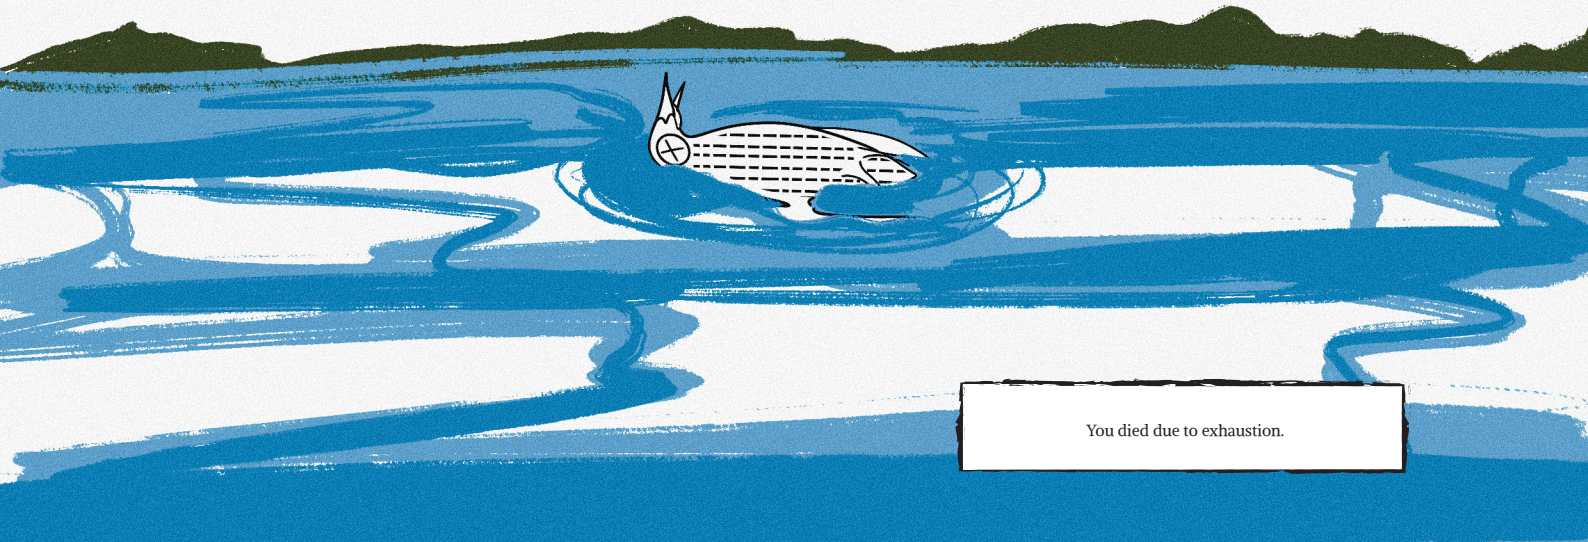

(Continue to page 30 and 31)

A bunch of Grey Plovers started gathering. None of the Grey Plovers were going near it. Free food! You did not need to struggle digging it up from the ground too. 'Thank you humans' you thought to yourself. Anxious, you quickly attempt to take a peck at it.

Take a peck at it
(go to page 28 and 29)

You decided to continue flying without resting. You realise it was a big mistake. Fatigue starts overwhelming you as you were passing by the sea. Your wings stopped working and you ended up drowning in the sea.

You died due to exhaustion.

You decided to ignore the plastic bag and continue eating. The plastic bag gets caught in your wings and you struggle to fly. You cannot continue flying.

You died due to human pollution.

You continued feeding near the contaminated water. You were so involved in the food you manage to find that your body starts filling up with the chemicals because you accidentally swallowed some chemicals too while eating.

You died due to environmental contamination in the water.

28

29

You realise it was not food, it was a fishing line! The humans were fishing! You tried flying but it does not work. The more you struggled the further you got tangled. Due to stress, you died from entanglement.

You died due to entanglement from a fishing line

You felt at peace. There seems to be no dangers further up the coastline. No humans disturbing, no contamination in the waters, no random trash, just peace and quiet with the other birds.

You continued living happily and await for your next destination!

Nestination: The Ultimate Birdventure is a create your own adventure book showcasing a series of places that you as a bird will travel to when you reach Singapore. You will go through the ups and downs, life and death of a bird. This book aims to create awarness in hopes that there will be lesser migratory birds accidentally killing themselves in the process of their migratory season. This book is also combined with the Nestination: The Ultimate Birdventure website showcasing the information of the birds named in this book and merchandise where all proceeds will be donated to Nature Society Singapore, Bird Society of Singapore and Project Avigate(NTU)
